

ADNOTO

Improving funding application efficiency with agentic AI

No-code platform for creating expert AI assistants to accelerate grant application eligibility checks, vetting, and reporting.

August 2025

HKPC ensures every funding applicant receives a fair, timely, and transparent review by using technology.

Drop in error rates

Advanced permission control

Use Case

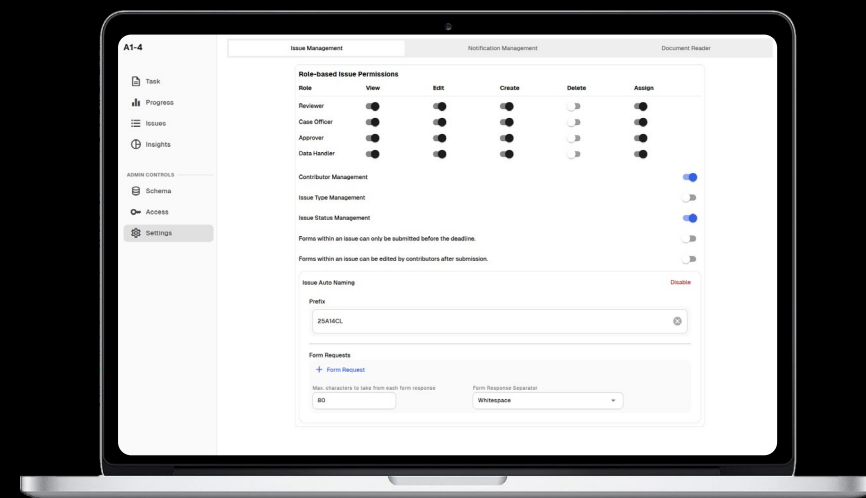

- Chinese Medicine Development Fund (CMDf) scheme A and scheme B vetting
- Making sure applicants, including practitioners and research institutions, meet eligibility requirements

Challenge

- HKPC must manually manage over 6,000 cases.
- Complex approval process involving multiple stages, types of applications, vetting officer roles, and declarations.
- Most applications are submitted offline or through a Word document.

Strategy

- Implemented a robust permission control by role, stage, type of forms, and declaration.
- Created a public URL for external parties to sign up and submit applications.
- Introduced parallel and sequential approval processes to enable application governance.

Cyberport automates funding application vetting for a HK\$500 million government grant programme

85%

Accuracy

3x

Faster vetting

75%

Time savings

Document vetting layout

Use Case

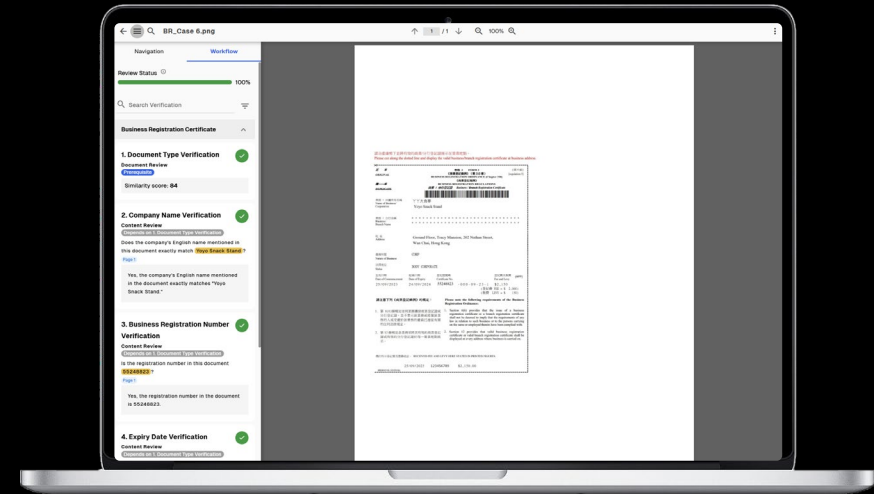

- Digital Transformation Support Pilot Programme (DTSP) application vetting
- Making sure SME applicants meet eligibility requirements

Challenge

- Cyberport must manually manage over 10,000 cases.
- Applications include more than 50,000 documents to be checked manually.
- Cyberport must regularly report the vetting progress for audit.

Strategy

- Trained AI automatically verify BR, CI, address proof and other docs.
- Streamlined application management, vetting officer assignment, and reporting
- Reduced vetting back-and-forth through auto-generated notifications.

Cyberport streamlined the reimbursement process with AI vetting agents

As an administrator of the Youth Start-up Internship Programme (YSIP), Cyberport reviews hundreds of applications and thousands of supporting documents each year to administer over US\$1 million to companies and students.

65%

Time savings

85%

Drop in error rates

3x

Faster applications

Challenge

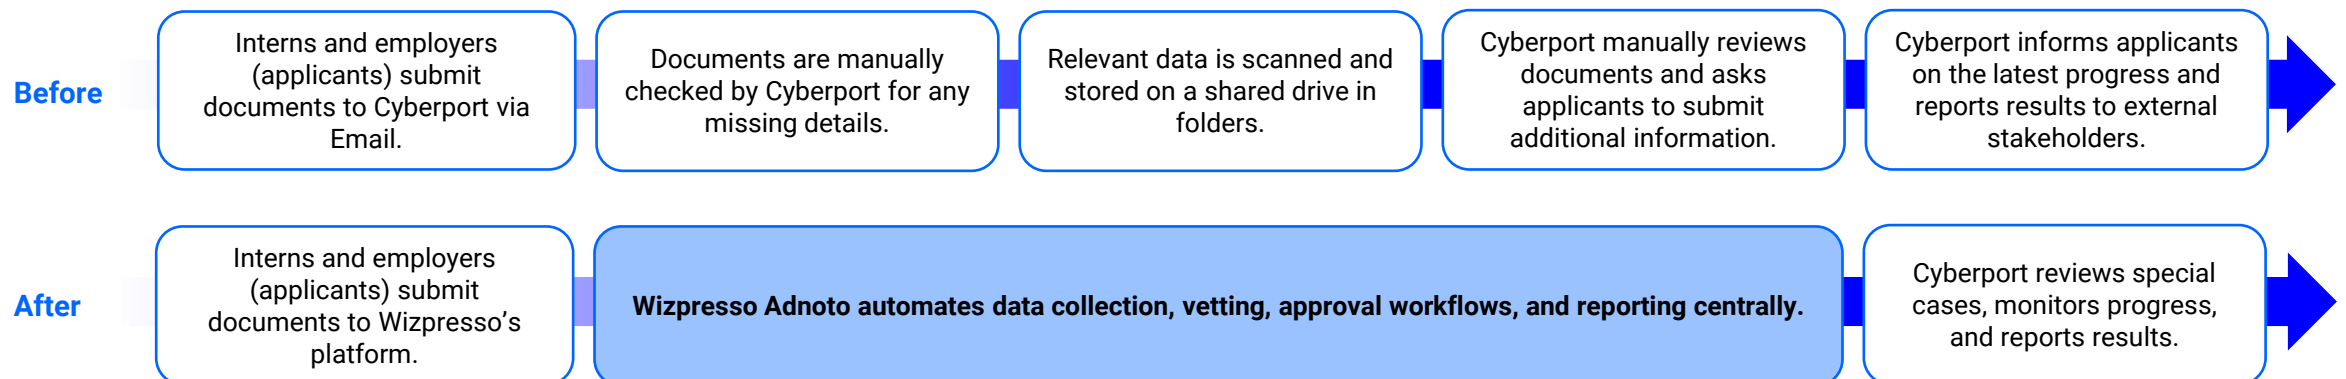

- Cyberport manually reviews 1,000+ documents, including business registration documents, bank statements, employment contracts, and MPF contributions for due diligence.
- The team receives forms and documents in scanned images, Word, and PDF formats via email for over 100 applications, making it tedious to search, track, and review the information.

Strategy

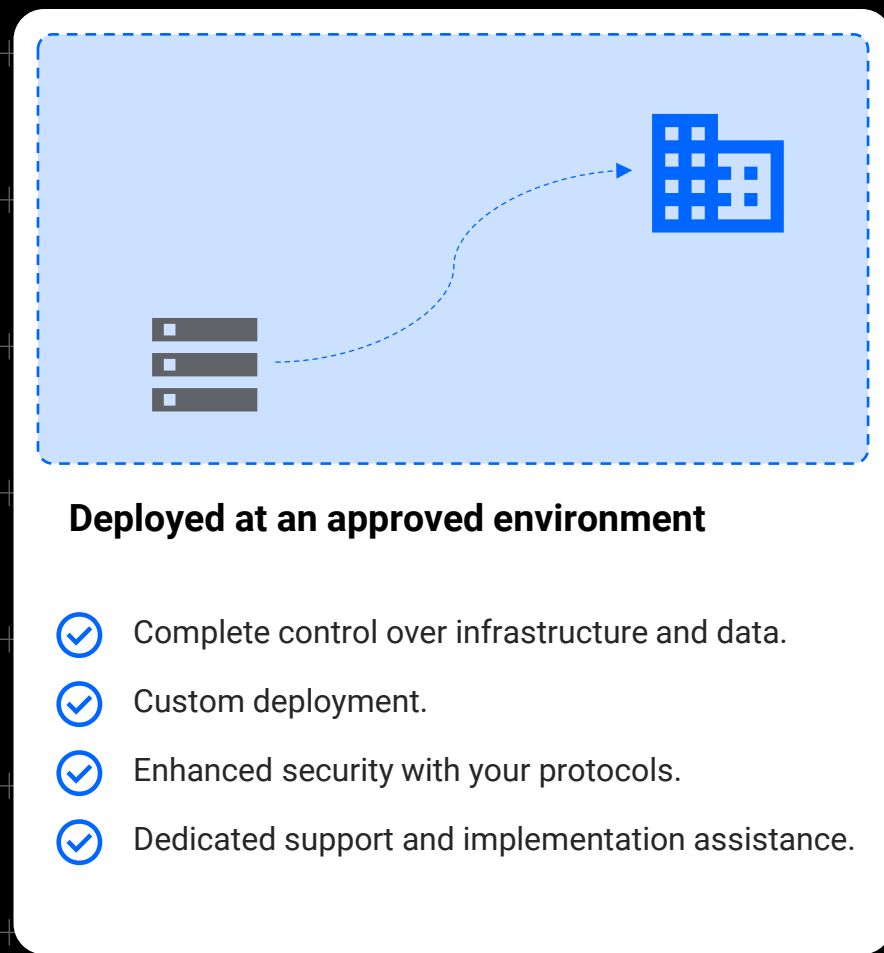

Through Wizpresso Adnoto, Cyberport

- Built automated verification workflows to check and validate information from 5 types of scanned, unstructured documents.
- Developed an application management platform that enables all stakeholders to submit information and track progress centrally.
- Can search and export with the help of AI to easily retrieve the relevant information and generate reports.

Workflow

+ AI vetting center to power and accelerate all funding applications +

AI-powered application and vetting

- Integrated with government data
- Standardized vetting process and taxonomy
- Powered by Wizpresso Adnoto

AI that goes beyond search and chat

AI-Powered Verification

Automate document review processes by building AI experts to check and verify supporting documents based on your requirements.

Application Management

Scalable case management system with advanced form and template builders, status management, automated alerts, and information submission portal.

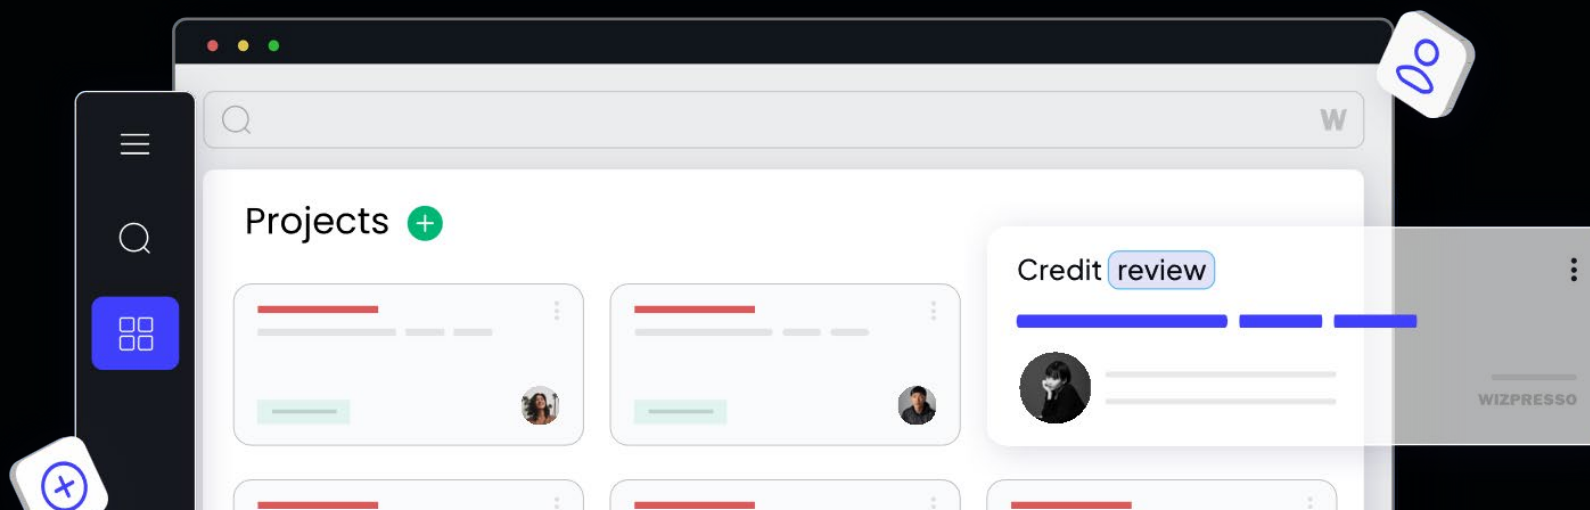

Insights and Reporting

Customizable dashboards, report generators, and export features to drive team productivity, track progress, and generate actionable insights.

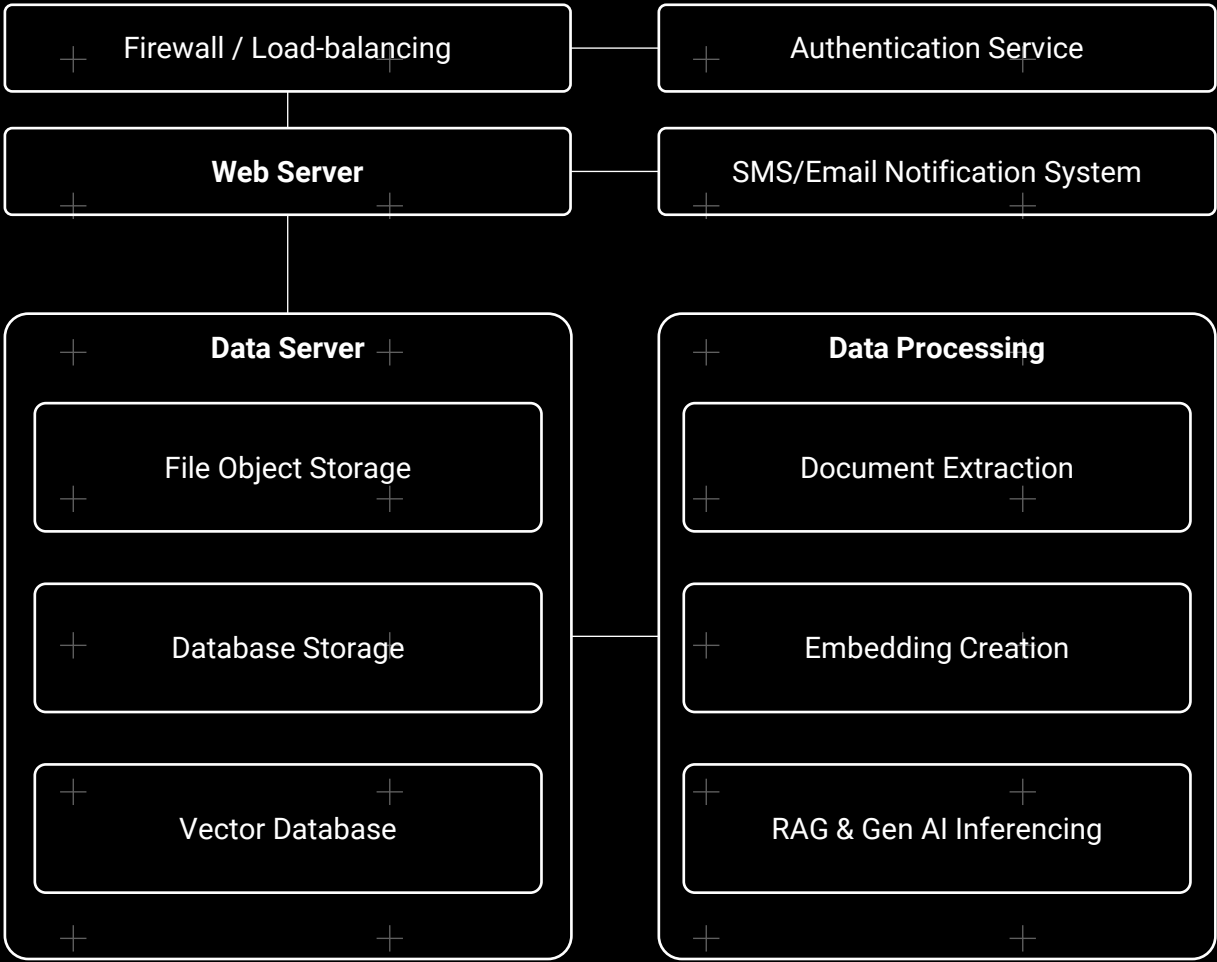

Robust Permission Control

Multi-layer permission management and access control features are integrated throughout the entire application.

Robust cloud infrastructure to ensure all data is secured

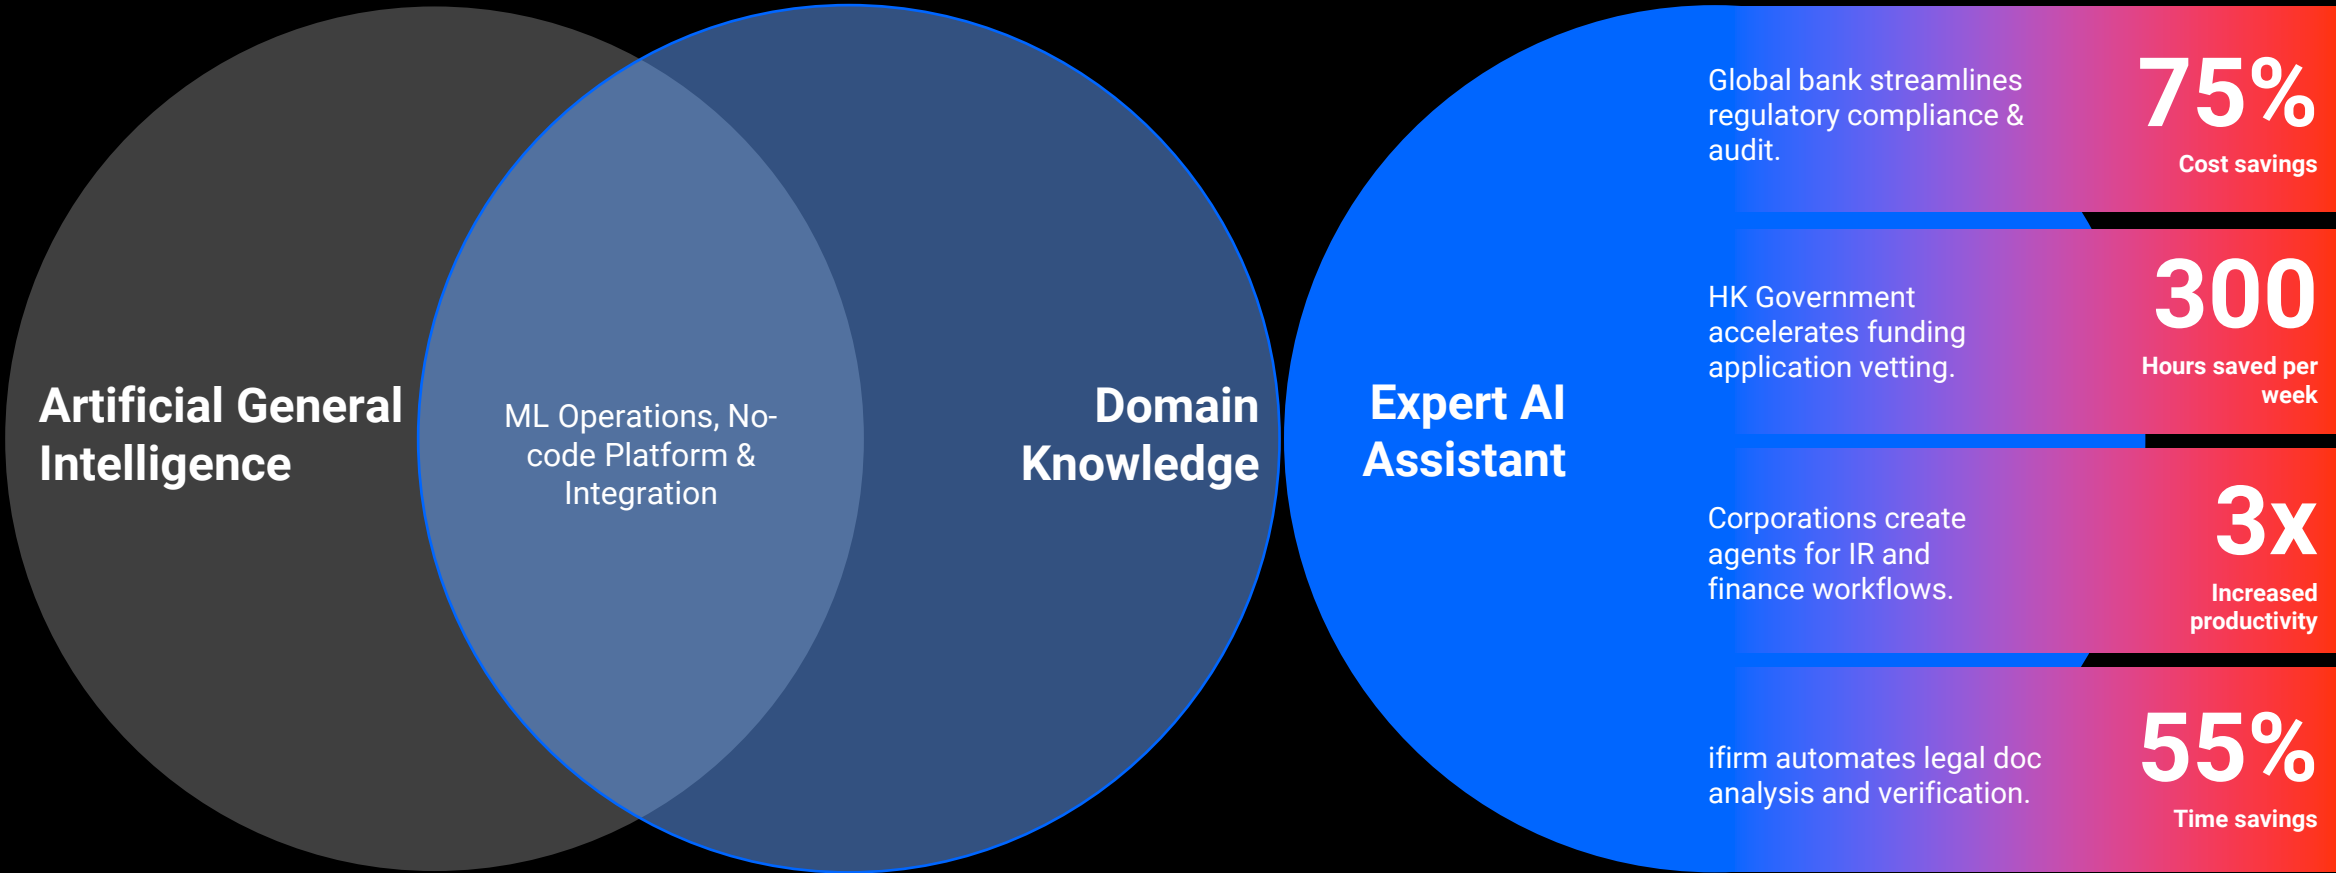

Hosting Details

- Adnoto can be installed on the cloud or a compatible infrastructure provided by GCIS.
- The data residency for data storage is in **Hong Kong SAR**.
- Adnoto’s infrastructure follows industry best practices, with the web server and data server segregated for optimal cybersecurity.

Hosting Specifications

Service Name	Specifications
Web Server	Operating system (Windows Server), Workload (Consistent, Number of instances: 2), Advance EC2 instance (t3.large - 2vCPUs, 8 GiB Memory), Enable monitoring (enabled), EBS Storage amount (30 GB)
Load Balancers	Elastic Application Load Balancers
Data Storage	Storage amount (100 GB), Nodes (1), Instance type (db.r5.large), Deployment option (Single-AZ), License (License included), Database edition (Web), Storage for each RDS instance (General Purpose SSD (gp2))
File Storage	Standard storage (500 GB)
Data Processing	Can be integrated with authorized vision, embedding, reasoning, and other language models.

Wizpresso powers enterprises to build expert AI with robust data and access management.

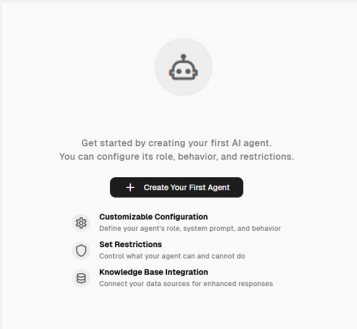

Augment All of Your Work on
One Integrated, Secure Platform

Domain-specific AI for legal, compliance, and professional services.

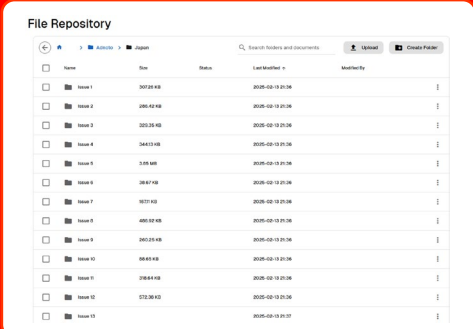

Expert Assistant

Build expert agents to engage stakeholders and deliver precise, purpose-built work.

Knowledge Base

Organize company knowledge in ways readable and retrievable by AI.

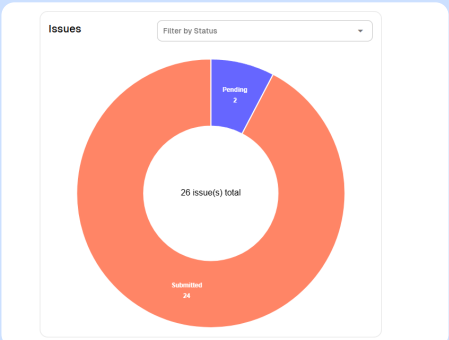

Streamline Process

Operationalize your workflows using prompts and chain-of-thoughts.

<input type="checkbox"/>	12	66	Content Verification	Active	Is there any request by the target company to apply a separate and longer term for "retained Confidential Information"?	
<input type="checkbox"/>	13	66	Follow up	Content Verification	Active	Is the separate and longer term for "retained Confidential Information" added to the term of the confidentiality agreement is not more than 3 years?
<input type="checkbox"/>	14	66	Content Verification	Active	Is the term for standstills (except if there are publicly listed securities), employee non-solicits and no contact provisions limited to 12-24 months?	
<input type="checkbox"/>	15	6d	Content Verification	Active	Are there any terms exceeding the foregoing upper limits?
