

AlphaReport

Agentic Enterprise Reporting & Analytics

Turn Trusted Data into Reports that Drive Action

AlphaReport brings report creation, distribution, analytics, and governance together. It is positioned to help teams deliver consistent operational reports, management summaries, without the manual reporting bottleneck.

Unified Report Creation and Visualization

AlphaReport brings operational reports, management summaries, and perform report migration within one reporting platform. Use shared templates and standardized layouts to maintain a consistent experience across departments.

Agentic Reporting

AlphaReport goes beyond static reports with AI agents that help users explore data, generate reports, and uncover insights through natural-language requests. By guiding users from questions to relevant views and suggested follow-up analysis, Agentic Reporting makes enterprise information easier to use and decisions faster to inform.

End-to-End Reporting Conversion

AlphaReport helps organizations move reports from traditional reporting platforms to a modern, governed reporting environment. An intelligent migration approach covers report inventory, template redesign, data-source mapping, and output validation—helping preserve business logic and reporting continuity while reducing reliance on legacy tools.

Why AlphaReport?

Reduce Reporting Effort

Replace repetitive report preparation with reusable templates, scheduled generation, and automated distribution. Give analysts more time to interpret results instead of assembling them.

Connect Data Across the Enterprise

Bring information from approved business systems into a consistent reporting experience. Standard definitions and governed data access help teams work from the same numbers.

Put Insights where work happens

Deliver reports through familiar platform, with export and integration options tailored to enterprise requirements.

Key Features

AlphaReport brings report modernization, design, delivery, and governance into one enterprise reporting solution. It helps teams migrate existing reports, connect trusted data, create consistent outputs, and distribute information through controlled workflows—so business users can access the reports they need with less manual effort.

Traditional Report Exploratory and Conversion

Pixel-perfect and Structured Reports

Reusable Report Templates

Scheduled Report Distribution

Agentic Reporting Formulation & Generation

Access Control and Audit Trails

Approach

Report Design and Modernization

- Rebuild reports using reusable templates
- Create operational reports and interactive dashboards

Delivery, Governance and Optimization

- Schedule and distribute reports to authorized users
- Monitor usage, access, and reporting activity

Report Discovery and Migration

- Inventory existing reports and dependencies
- Map data sources, calculations, and business rules

Validation & Integration

- Compare migrated outputs with existing reports
- Connect approved data sources and business systems

8 Key Capabilities with ALPHAREPORT

Intelligent Report Migration

1 Assess and modernize reports from traditional platforms while preserving essential business logic and layouts.

Reusable Report Template Design

2 Build consistent operational and management reports with shared templates and standardized formatting

Pixel Perfect Reports

3 Explore performance through pixel perfect reports, filters, and drill-down views.

Enterprise Data Connectivity

4 Bring approved data from multiple systems into a consistent reporting experience.

Scheduled Report Delivery

5 Generate and distribute recurring reports automatically to defined audiences.

Agentic Reporting Generation

6 Make reports available from natural language and generate without any code development

Role-Based Access Control

7 Restrict report and data access according to user roles and responsibilities.

Audit Trails and Usage Monitoring

8 Track report activity to support governance, troubleshooting, and continuous improvement.

WHAT WE OFFER

AlphaReport

Private & Secure Reporting Processing

Deploy AlphaReport directly within your cloud or on-premises infrastructure, guaranteeing full data ownership, confidentiality, and compliance with internal governance policies

AI-Driven Conversion Acceleration

Accelerate report conversion with next-generation AI, intelligent layout recognition and exploration, and context-aware extraction for faster and more reliable data capture across all reports

Advanced Document Intelligence

Leverage sophisticated AI for semantic understanding of report structures, precise field mapping, dependency detection, and the application of business-specific rules

Intelligent Self-Service Interfaces

Provide cutting-edge, user-friendly report platform powered by AI-assisted review and exploration, enhancing operator productivity and report oversight efficiency

Seamless Enterprise Integration

Ensure effortless connectivity with your existing internal and external systems, and report systems, fostering streamlined operations and end-to-end report governance across your organisation

Continuous Optimisation and Refinement

Benefit from iterative model improvement cycles incorporating user feedback, extraction validation, and performance benchmarking for ongoing accuracy and reliability enhancements
