Product Brief

From company knowledge to finished work

Deliver secure AI powered knowledge intelligence

Enterprises generate vast amounts of information, yet teams often struggle to find the documents, insights and historical knowledge they need.
MCintelligentplus is an AI knowledge workspace that connects the places your team keeps what it knows, answers questions with cited sources, and turns the answer into reports, decks and spreadsheets. People stay in the apps they already use. IT keeps the controls.

25+	10	5	7

FROM QUESTION TO DELIVERABLE

How it works

Five steps. Every answer keeps its source, and nothing is written until you approve it.

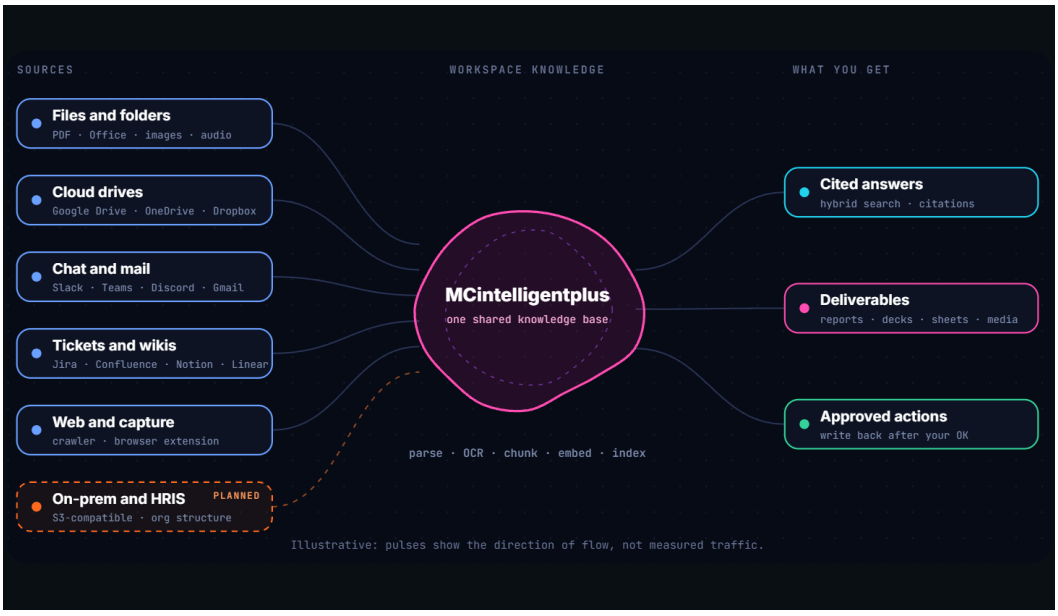

STEP 1	STEP 2	STEP 3	STEP 4	STEP 5
Connect	**Understand**	**Ask**	**Create**	**Approve**
25+ sources	OCR · index	Cited answers	Reports · decks	Your OK first

01 · KNOWLEDGE IN

Every source, one workspace

Scans are read with OCR, audio is transcribed, and everything is indexed for search.

Connect

25+ connectors, or upload files and folders. Sources re-sync on a schedule.

Understand

OCR for scans, transcripts for audio, files sorted by source, date and topic.

Share

Workspaces per project or client, plus organization-wide knowledge bases.

02 · RETRIEVE

Answers that show their sources

YOU ASK

What did we promise the client about where their data is hosted?

MCINTELLIGENTPLUS ANSWERS

The signed SOW keeps hosting in Hong Kong [1]. A later Teams thread limits that to production data [2]. The 2025 proposal still says Singapore [3], so the documents disagree.

SOURCES

[1] SOW_v3.pdf
Google Drive · p.12

[2] #neptune thread
Teams · 14 Mar

[3] Proposal_2025.pptx
OneDrive · slide 9

Hybrid search (meaning + keywords) · citations you can open · scoped to your workspace · example is illustrative

03 · DELIVER

From request to finished deliverable

A main agent plans the work and hands parts to specialists. You review every draft before it leaves.

- Report
- Presentation
- Spreadsheet
- Chart
- Podcast
- Speech
- Video summary
- Image
- Resume
- Web page

Write back, with your OK

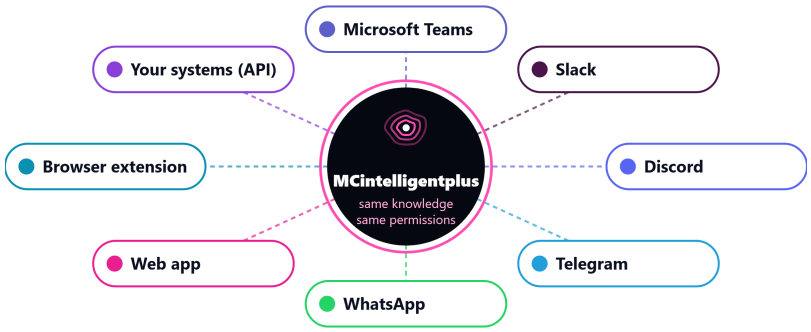

Create or update content in Notion, Drive, Gmail, Calendar, Jira, Linear and Confluence. Every action is logged.

Automations

Run an agent on a schedule or when a file lands in a folder, and send the result to Notion, Slack, Linear or Drive.

04 · EVERYWHERE & 05 · CONTROL

Works where you already work

Governed by design

- **Roles and groups:** decide who sees what
- **Single sign-on:** Google, OIDC, SAML, LDAP
- **Approvals and audit log:** risky actions ask first, all are logged
- **Your models:** cloud models, or run locally
- **Your servers:** hosted, private or Kubernetes
