We Help Enterprises
Accelerate **AI Adoption**
To Unlock Their Full Potential.

WHO ARE WE?

We Apply AI For the Enterprise.

Founded in 2023 and headquartered in Hong Kong, we help businesses turn artificial intelligence into practical, everyday operations.

We focus on AI agents that understand instructions, use business knowledge and complete real work.

We serve organizations that want measurable operational improvement, not isolated AI experiments.

Our group combines product development, workflow design, system integration and AI transformation consulting.

AI agents that hold business knowledge and deliver real work outcomes.

AI Agents Move Beyond Conversation to Complete Business Tasks

Unlike a basic chatbot, an AI agent understands your goals, orchestrates the work and delivers actionable results.

WHO WE FIT?

Built For Repetitive, Document-Heavy Work

If the same process runs every week, an agent can carry it.

01

Repetitive

Same steps, high volume, clear rules.

02

Document-heavy

Invoices, forms, contracts and reports to check and file.

03

Coordination-heavy

Chasing missing items and tracking status across systems.

Your Custom Enterprise AI Workspace

Three Parts One AI Workspace

Every Workflow Makes the **AI Stronger**

The more you use InnDesk AI, the smarter, faster, and more accurate it becomes.

Our AI Agents Support Every Major Business Function

01

Finance

Document processing, reconciliation support and management reporting

02

Operations

Data collection, status tracking and exception handling

03

Sales & Marketing

Research, content preparation and CRM updates.

04

Customer Service

Triage, knowledge-grounded responses and follow-up

05

HR & Admin

Onboarding, policy support and document workflows.

Company Knowledge is Your Company Database

One governed store of approved documents, completed workflows and agent conversations where the source every agent reads from and writes back to.

What the database holds

Approved documents

Policies, SOPs, contracts and reports your team has signed off.

Workflow results are written back

Every completed run — its data, decisions and approvals — is recorded into the knowledge base.

Agent conversations are retained

Chat history and the answers your team confirmed are stored, so the next request starts from what was resolved.

Exception decisions are logged

How each edge case was judged, by whom and why — so the same call is made consistently next time.

Connect With 40+ Applications

Connect email, cloud drives, databases and business applications through tailored workflows.

HOW WE WORK?

Forward Deployed Engineers Work Inside Your Team

Our forward deployed engineer joins your team, learns the process from the people who run it, and builds on your real cases.

Embed and Map the Work

The engineer works next to the team that owns the process, so the design starts from what really happens.

Embed & map

Build & pilot

Live & scale

Shadow the process

Sit through a full cycle of the work, case by case, including the messy ones.

Inventory inputs

Document types, source systems, approval points and where the delays sit today.

Agree the metric

One number that decides whether this deployment worked — turnaround, accuracy or volume.

Build and Pilot on Real Cases

Rules and connections are configured on your live data, then run alongside the team

Embed & map

2

Build & pilot

Live & scale

01

Configure the agents

Rules, business rules, knowledge sources and the human checkpoints that stay mandatory.

02

Connect the systems

Inboxes, drives, databases and business applications, with permissions scoped per connection.

03

Run in parallel

Compare agent output with the team's, tune the exceptions and record what was corrected.

Fitted to Your Operations

The workflow and its agents are now built to fit how your company runs

Embed & map

Build & pilot

Live & scale

Matched to your rules

Agents follow your approval points, terminology and document standards, with owners named for each decision.

Tuned on live results

Accuracy, turnaround and exception volume are reviewed after go-live, and the agents are adjusted to match.

Ready for the next workflow

The same knowledge base and connections carry over, so the adjacent process costs far less to set up.

Workflow Example 1 - Missing Items Identified Automatically

Track every expected file across every client.

500
clients

×

20
document types

×

10,000
expected items

=

AI monitors approved inboxes, identifies each file, files it correctly and flags missing items.

Applicable to legal, insurance, property and logistics teams.

Review queue cleared

Review, closely or confirm the document before filing.

Open review queue

Review / staging queue0/0

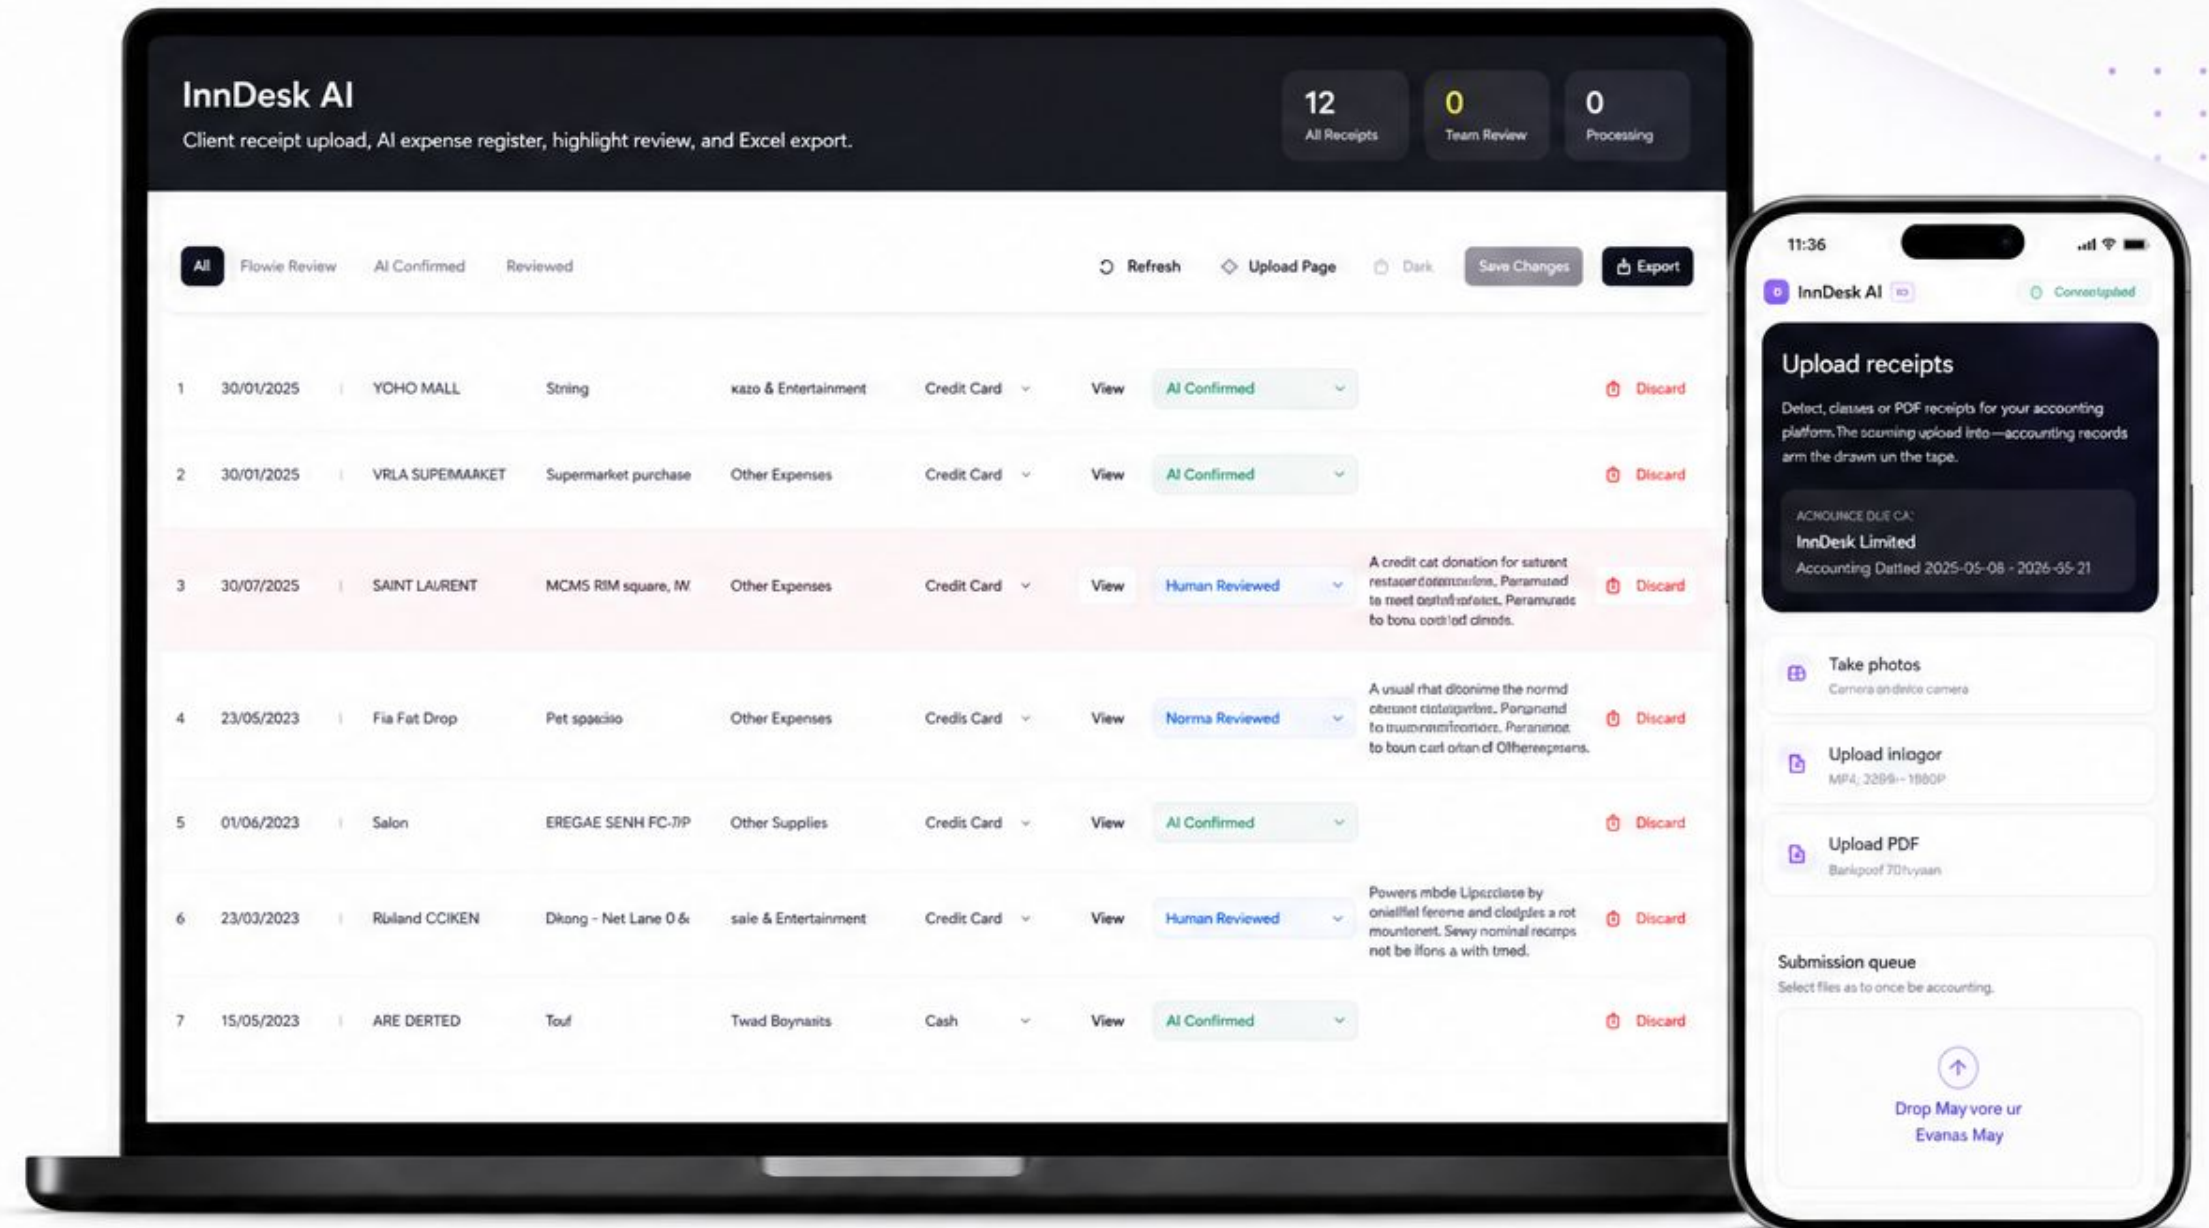

Attachments that need confirmation, remapping, or discard before filing.

✓

No pending review items.

Workflow Example 2 - Reducing Document Processing Time

From a photo of a receipt to accounting-ready data, without manual keying.

01 Extract

Date, supplier, amount, currency and reference.

02 Validate

Apply business rules and highlight exceptions.

03 Export

Prepare Excel or accounting-system-ready data.
