Cantonese Dominance in Hong Kong's Business

The Unique of Cantonese in Hong Kong

- **Linguistic Complexity:** Cantonese, spoken by over 85 million globally, is a tonal language with nine tones, unique grammar, and extensive slang (e.g., Hong Kong colloquialisms like **"hea"** or **"chur"**).
- **Code-Switching:** Hong Kong speakers frequently mix Cantonese with English and Mandarin, complicating transcription accuracy.
- **The Divide Between Written and Spoken Forms:** Daily Cantonese conversation uses a vast number of unique words, grammar, and particles (e.g., "嘅", "喺", "啲"), but formal writing typically uses Standard Written Chinese
- **Vivid Local Slang:** It possesses a rich collection of slang and idioms that cannot be understood literally (e.g., "扮嘢", "吹水", "狼胎").

Votee Cantonese Speech-to-Text

The Engine That Understands Hong Kong Speech

1 Native Cantonese Understanding

Our AI model is purpose-built for Cantonese, capturing the correct characters for homophones. Accurately transcribes modern slang, colloquial phrases, and English/Cantonese code-switching.

2 Tailor-made for Government Departments

Standard models fail on specific jargon. We create a custom vocabulary layer for your organization. Regardless of which government departments, our model adapts for pinpoint accuracy.
