

New standard of smart building under New Normal

Digital Transformation
Sustainability & Resilience

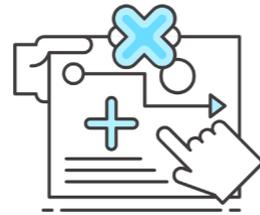

Current issues with existing building

Why cannot building be smart ?

Complicated and Disconnected systems

Lack of record of Operation and Maintenance

Poor data quality for analysis

Lack of Expertise

High Investment Cost

If a cell phone can be smart...

Importance of Operation System (OS)

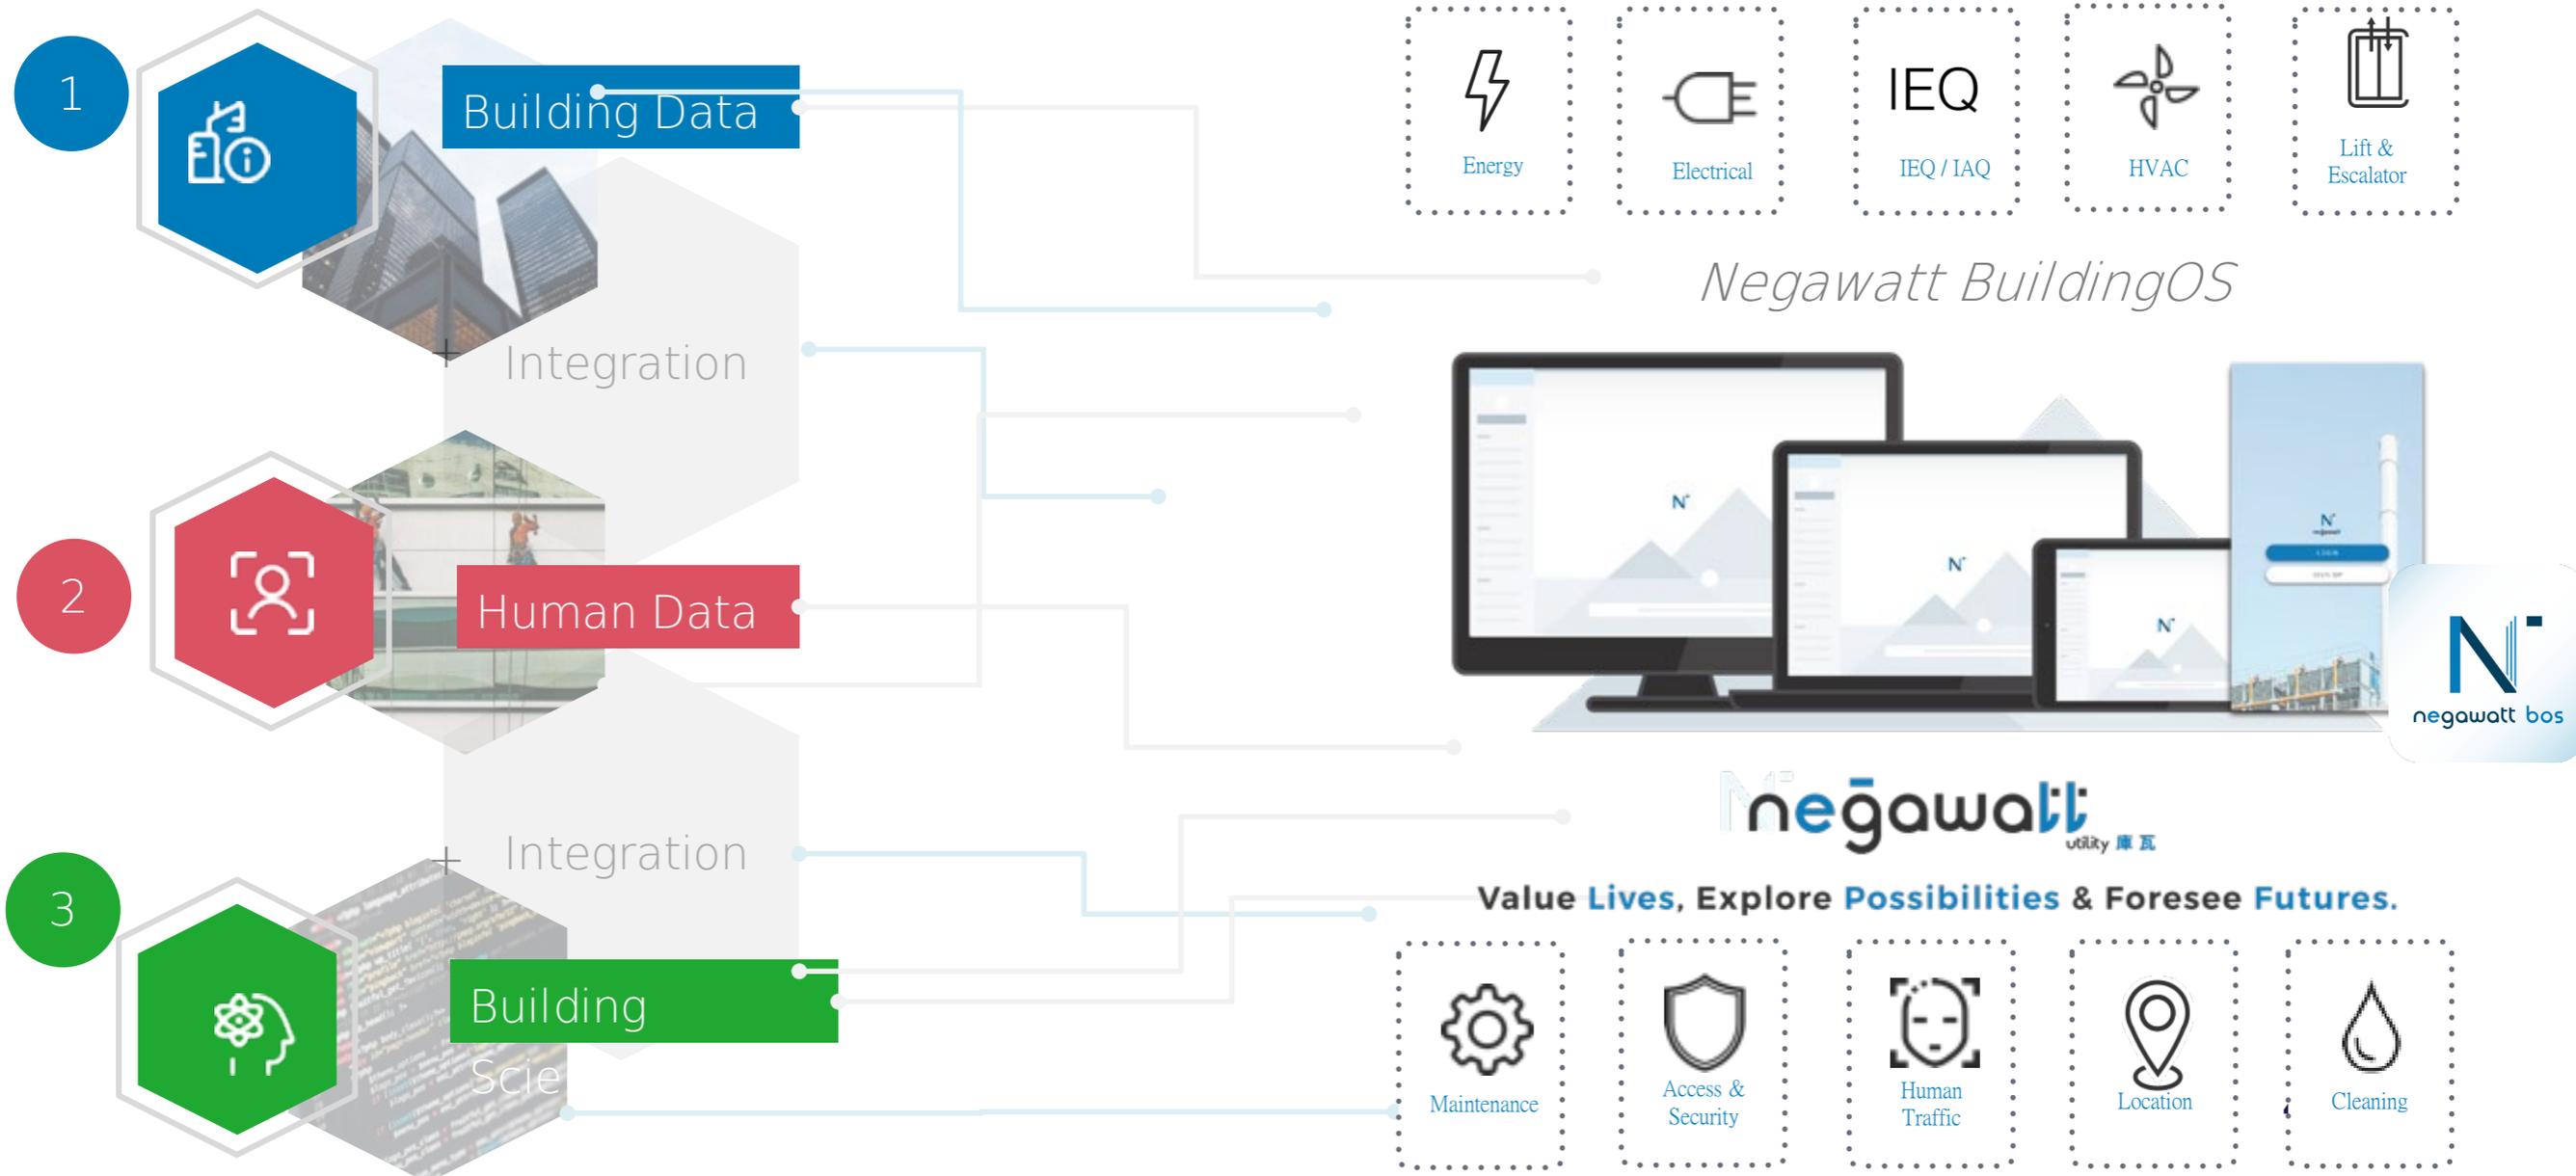

*Limited Function
Low Scalability on Function
No Integration*

*Multi Function

Within 3 years of marketing, Negawatt has wide range of customer bases, covering various sectors, including developers, building owners, hotels, government, school, data center etc.

Strategic Partners

Well-performed Algorithm to Achieve Chiller Plant Energy Saving

Chiller Analytic Manager (CAM)

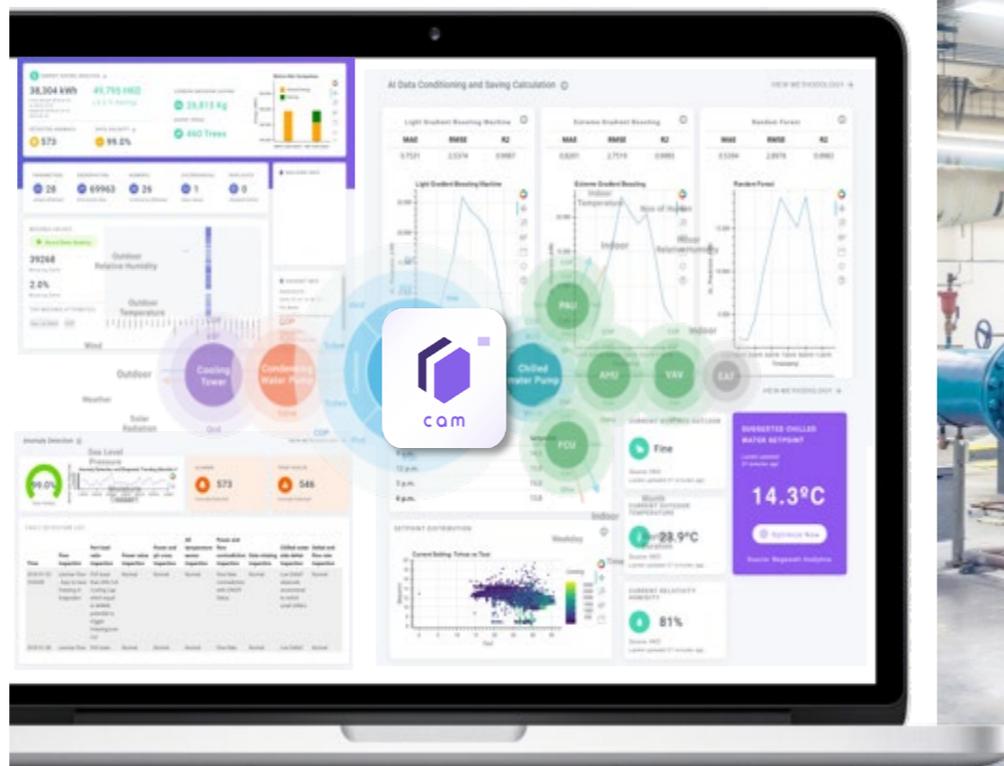

Features

- Chiller Optimization via A.I./ Big Data Analysis
- A.I. self-learning to identify energy saving opportunities automatically
- Equipment Fault Detection and Diagnosis

Benefits

- Saves 10%-20% energy on Chiller Plant
- Chiller Plant Signature
- Reduce energy engineering data crunch time
- Avoid human error based on experience
- Preventive Maintenance

**Fault Detection

Case Study

Converting Successful Cases to Group Deals

New Era of Property Services

AI and Digital Transformation of Technical Services

Local efforts are important for a carbon-less & smart city.

Since September 2019, Sino Group has engaged Negawatt, a local prop-tech company specializing in smart building solutions, to further continue its digital transformation process for technical services and to drive sustainability initiative by reducing energy consumption.

With the efforts of property management team and Negawatt's big data, IoT technology and AI analysis, Exchange Tower is able to reduce 12%+ of its chiller plant energy consumption while maintaining same indoor comfort level under same comparable conditions. Echoing with EMSD's promotion of retro-commissioning (RCx), Sino Group is able to take it a step further to perform continuous retro-commissioning work with Negawatt's smart building platform.

2020 SINO Smart City New Blueprint

Sino Group addresses the importance of on-going retro-commissioning work. Retro-commissioning is one of the key initiatives to promote energy saving for existing buildings. With Negawatt's professional domain expertise in building operational & systematic process, followed by a comprehensive on-site measurement testing and massive data analysis, the Negawatt's smart building platform can help to identify energy saving and in-turn lower energy bills.
